Apicbase – Remote Software Developer

What you'll be doing

Apicbase is a fast-growing scale-up! We are specialists in developing software for the restaurant and catering industry. With our software, we take our fantastic customers to the next level when it comes to getting their entire food & beverage management under control. We are indispensable in helping them to pass on orders, draw up inventories, calculate food costs, display allergens and so on!

- You'll work on the software that powers apicbase.com by writing Python (Django) and Javascript code (Vue JS).

- You'll join and contribute to team meetings where we design the blueprint for the future (and sometimes the past, in case of refactorings) of Apicbase.

- You'll become part of a team of talented colleagues adopting lean methodology with great support for our Product Owners, Tech Team Leads and Quality Engineers.

- All over apicbase.com there will be bits and pieces of code highlighting your unique strengths and skills.

- You'll always be on the lookout for streamlining our development process.

- You'll really make a difference and play a defining role in the future of Apicbase

Who are you?

- We prefer open minded, bright people above experts in a single field, but the following things will get you up and running just that wee bit faster.

  - Experience with Scrum and Git

  - Python and/or Django experience

  - Experience writing web apps using web frameworks (Laravel, Django, Angular, ...)

  - Experience with continuous deployment pipelines

  - HTML, CSS/SASS, Javascript/Vue

- You have a feeling for efficiency when writing database queries or more complex algorithms.

- When you stumble upon code in need of a small refactoring you'll not hesitate and just do what needs to be done

- You're not the 'but it works on my machine...' type of guy/girl

What do we offer?

- A full time and ultra-varied job at a well-funded, successful and fast-growing scale-up

- Working in a company-culture with ownership, self-responsibility and accountability

- Being part of a young, flexible and dynamic team that builds together the future of Apicbase

- The time to learn and master state-of-the-art technologies

- Possibility to travel to technology and food events

- An attractive and competitive salary
